Vesta decorative fence with 60x40 posts

What is needed to install the fence?

Vesta decorative fence with 60x40 posts

Tape measure

Rope / wire

Shovel /
Auger

Angle grinder

(Rubber) Hammer

Level

Wrench

Socket wrench 10mm

**Make it even easier for yourself.
The following could also
come in handy!**

- Postdriver
- Blanket voor een zachte ondergrond.
- Boxcutter
- A piece of wood in the same size as a fencepanel.

Check your order.

Vesta decorative fence with 60x40 posts

The fencing, the posts, the gate and concrete are delivered on a pallet, possibly on several for large orders. Small orders are placed upright and tied to a wooden trestle and finally sealed. Large orders transported on big pallets are usually not sealed in foil.

Check the goods upon delivery and note any damage on the consignment note before signing. **(after signing the right of complaint expires).**

Keep the order in a safe and covered place until assembly to keep it in good condition.

Carefully remove the products from the pallet.

Vesta decorative fence with 60x40 posts

Carefully cut open the foil with a boxcutter without damaging the products (Best on the short side of the pallet).

Then cut the green straps and pull them off the pallet. Carefully remove the products from the pallet.

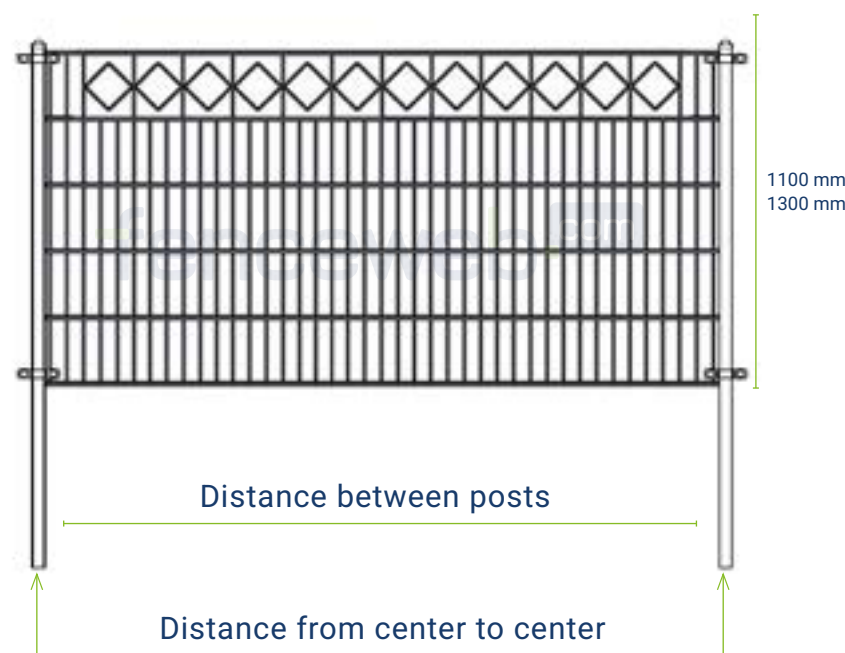

Do you have posts or cover strips with your order? Make sure to lift them up properly when you remove them from the pallet, this way you prevent scratches.

Overview

Vesta decorative fence with 60x40 mm posts.

Vesta decorative fence with 60x40 posts

*Center to center is the distance between the center of one object and the center of the other object. So from the center (middle) of the first post to the other center (middle) of the second post.

First carefully read the manual and make a plan of action before you start assembling!

Preparation:

Measuring is knowing.

Vesta decorative fence with 60x40 posts

- 1 Level the ground at the location where the fencing will be placed. Free up enough space to work properly.
- 2 Determine the starting point of your fence. This starting point must not be able to change in dimensions later.
- 3 Measure where the posts should be placed. For correct positioning of the posts, measure from the center of the posts. (The center to center*) The fence overlaps about 1 cm per post with the post. So you calculate the length of the fence minus one cm on both sides to know the space between the posts.
- 4 Stretch a wire along which your fence must be placed. Use picket posts here if necessary.
- 5 It is advisable to use for example a piece of wood in the size of the fence, so you don't need a fence to measure between the posts with a fence.

Assembly: The first post.

Vesta decorative fence with 60x40 posts

Dig or drill a hole of approximately 30 x 30 cm where the first post is to be placed. Remove any stones, roots or other material from the ground where the posts will be placed.

Place the post in the hole. Check if it is level and place it against the stretched wire. Then bring it into the ground to the correct height. Use one if necessary a post driver. The 60x40 mm post generally goes 60 cm into the ground. We recommend keeping the fencing minimal 5 cm above ground level to place.

Secure the post with (quikdrying) concrete. For fencing higher than 1 meter, we recommend to always secure the posts with (quikdrying) concrete. Follow the instructions on the packaging. Let the concrete harden before mounting the fencepanels.

Assembly: Preparation and second post.

Vesta decorative fence with 60x40 posts

It is wise to install the fences with two or more people.

When you install a fence for the first time, we recommend starting with one fencepanel. From there you can measure how far apart the posts should be and apply any corrections. So don't place all the posts in concrete first. **Posts that are set in concrete are not easy to move.**

Measure from the first post with a fence or with a measuring stick where the second post should be, dig or drill another hole and level the post in concrete. When you are mounting the brackets later, place the nuts on the bolts, but don't tighten them yet. This way, the fence is in place, but can be corrected later. Then do the same to the next post. Work your way to the end, fence by fence and post by post.

Montage: Sorting the brackets.

Vesta decorative fence with 60x40 posts

- 9** Prepare the brackets for mounting.
Divide the brackets over the number of posts to see how many are needed per post. Also sort the end, middle and corner brackets. Then determine at what heights you place the brackets.
Mount the brackets at 400 - 600 mm from each other. Take into account that caps will be placed on top of the posts later, so you will need some space for that.

Tip: You might drop a nut or bolt during assembly. To prevent you from losing it, you can place a blanket at the bottom of the post that will catch it.

Montage: Installing a fencepanel with a beginning- or end-bracket.

Vesta decorative fence with 60x40 posts

- 10** Slide the correct amount of end brackets over the post (depending on the height of the fence). Then place the plastic clamps around the outer bar of the fence at the location of the brackets. Slide the gate with the clamps into the bracket. Insert the bolt through the bracket and on the other side of the bracket place the washer and nut on the bolt, but do not tighten yet. Repeat for all brackets on the post. You can rest the gate on a raised platform so that it is approximately at the right height, but make sure that the fence cannot fall over while you secure the other side of the fence.

Make sure the lower bracket is above the twin bar and attached to the fence. When placing the bolts, take into account the direction in which you insert the bolt. Make sure that the nut cannot be loosened from outside the fence.

Montage: Installing a fence panel with an intermediate bracket.

Vesta decorative fence with 60x40 posts

- 11** When attaching the first fencepanel with the middle brackets, the second fencepanel should be placed between the brackets at the same time. Place the second fencepanel against the post and place one middle bracket part against one side of the fencepanel. Then place the second part of the bracket against the other side and tighten the brackets together with bolt, nut and washer, but not yet tightened completely. Then dig or drill the next hole and secure the next post in the same way. Repeat until the end of the fence.

Montage: Installing a fence panel with a corner bracket.

Vesta decorative fence with 60x40 posts

- 12** When the fence is going around a corner, use the corner brackets. The corner bracket consists of two parts, a small part and a large part. It is best to carefully slide the large part over the post to prevent damage. When all the brackets that are needed are on the post, you can put the fence against the bracket. Secure these in the same way as the intermediate brackets. Hold the second section against it, insert the bolts and screw on the nuts with the washers.

Montage: Levelling the fence panels and tightening the bolts.

Vesta decorative fence with 60x40 posts

- 13** Start again at the first fencepanel
Keep the fence at the correct height
and level the fence with a spirit level.

- 14** Then tighten the nuts tightly with a
socket wrench or wrench.

- 15** When all fences are levelled and the
brackets are tightened, take a
self-tapping screw and screw it in each post
into the hole in the top bracket. One screw per
post is enough.

Montage: Shortening a fencepanel.

Vesta decorative fence with 60x40 posts

- 16** If you want to place a fencepanel
that needs to be shortened, you
can shorten it with an angle grinder.

Use the spray can to paint the grinded
part of the fence to prevent rust.

The last step.

Vesta decorative fence with 60x40 posts

17 As a final action, place the caps on the posts.

Congratulations, your fence is installed!
