Tools needed to install the gate.

Single Sagitta decorative gate

Wrench 19mm

screwdriver
Phillips head PH2

Allen key
5 and 2,5 mm

Tape
measure

Level

Shovel / auger

Check your order.

Single Sagitta decorative gate

The fencing, the posts, the gate and concrete are delivered on a pallet, possibly on several for large orders. Small orders are placed upright and tied to a wooden trestle and finally sealed. Large orders transported on big pallets are usually not sealed in foil.

Check the goods upon delivery and note any damage on the consignment note before signing. **(after signing the right of complaint expires).**

Keep the order in a safe and covered place until assembly to keep it in good condition.

Carefully remove the products from the pallet.

Single Sagitta decorative gate

Carefully cut open the foil with a boxcutter without damaging the products (Best on the short side of the pallet).

Then cut the green straps and pull them off the pallet. Carefully remove the products from the pallet.

Do you have posts or cover strips with your order? Make sure to lift them up properly when you remove them from the pallet, this way you prevent scratches.

Dimensions of the Single Sagitta gate.

Single Sagitta decorative gate

Preparation: Measuring is knowing.

Single Sagitta decorative gate

Lay out the gate parts on a soft surface and measure them. Determine the direction of rotation and position of the gate before placing the posts.

Assembly: Pre-install hinges.

Single Sagitta decorative gate

Pre-adjust the hinges to ease assembly later. Tighten the nut on the eyebolt and then tighten the eyebolt into the gate leaf. Do not tighten the nut against the gate leaf yet. Turn the eyebolt in the same number of turns on both hinges.

If you have too little or too much space between the posts than you had in mind, you can adjust the position of the eyebolt in the hinge plate by adjusting the position of the nuts on the eyebolt.

Assembly: Secure the posts.

Single Sagitta decorative gate

Level the posts with a spirit level at the correct position and height and secure them with concrete. To do this correctly, follow the instructions on the packaging. Let the concrete harden before installing the gate wing!

Note: The gate can be adjusted in width after installation, but not in height. So make sure the posts are the same height and level.

This step also determines how the gate opens and closes. Make sure you place the posts correctly.

Assembly: The lock keep.

Single Sagitta decorative gate

Assemble the lock keep on the post. Make sure that you mount the keep correctly in relation to the direction of rotation of the gate.

Assembly: The gate wing.

Single Sagitta decorative gate

Tighten the nut on the eyebolt well so that the gate leaf is firmly attached to the eyebolt. Then hang the gate leaf in position.

Make sure that the hole of the hinge plates on the post and the hole of the eye bolt are aligned and insert the hinge bolt through them and turn the bolt until it is stuck in the recess. Finally, tighten the small bolt with an Allen key. If the gate does not fit completely, you can still adjust the eye bolt.

Assembly: The lock.

Single Sagitta decorative gate

Insert the doorhandle pin through the lock and out through the other side. Slide the doorhandles on the pin on both sides and tighten them with the Allen key provided.

Congratulations, your gate is installed!
